CHAPTER 1

Demo

The Demo group is the entry point to Medivac.ai. It orients new users to the platform and provides a controlled way to present the suite to external stakeholders without exposing live operational data.

Chapter 1

Demo

Demo Overview

Welcome screen and platform orientation

The Demo Overview is the first screen most users encounter when they open Medivac.ai. It introduces the application, confirms that the platform is online, and lets the user establish the role they are operating in for the current session.

A live status indicator at the top of the screen reports the real-time health of the platform and its connected services. When all systems are nominal the indicator is green; degraded integrations or maintenance windows are surfaced here so users know before they begin work.

Key elements

- Platform introduction and quick-start guidance for first-time users.
- Live status indicator showing system and integration health.
- Role selector used to tailor the interface to pilot, nurse, doctor, dispatcher, engineer, safety officer, management, or admin.

Who uses it

- All roles — the overview adapts its guidance to the selected role.

Client Demo Mode

Curated demo experience for external stakeholders

Client Demo Mode presents a polished, curated walk-through of Medivac.ai designed for external audiences such as prospective clients, government partners, and visiting stakeholders. It showcases the breadth of the suite using representative sample data.

Crucially, this mode hides sensitive operational data — patient identifiers, live mission details, and commercially sensitive figures are suppressed or replaced with demonstration values, allowing confident presentation without breaching confidentiality.

Note Client Demo Mode is a presentation layer only. No live records are edited while the mode is active.

Key elements

- Curated screens that highlight flagship capabilities.
- Automatic suppression of patient-identifiable and commercial data.
- Presenter-friendly navigation for smooth live demonstrations.

Who uses it

- Senior management, business development, and admin staff presenting to external audiences.

Navigation Overview

Left-navigation structure and category groupings

Navigation Overview summarises how the left-navigation groups and their modules are organised across Medivac.ai, and records recent changes to that structure so users can find relocated modules quickly.

“Navigation updates (July 2026):” Demand Forecasting has moved from Business to Missions. FBO & Handling and Airborne EFB have moved from Business to Assets. The SBP Portal remains under Operations. Navigation category icons now always display in colour.

Note If a previously bookmarked module cannot be found under its old category, check the Recent navigation changes above before raising a bug report.

Recent navigation changes

- Demand Forecasting: Business → Missions.
- FBO & Handling: Business → Assets.
- Airborne EFB: Business → Assets.
- Senior Base Pilot (SBP) Portal: unchanged, remains under Operations.
- Navigation category icons now always display in colour.

Who uses it

- All roles — orientation reference for locating relocated modules.

2

CHAPTER 2

Dashboards

The Dashboards group brings together the situational-awareness surfaces used across RFDS SE — from the daily morning briefing to always-on operations room wall displays.

Chapter 2

Dashboards

The 8:45

Daily morning briefing dashboard

The 8:45 is the daily morning briefing dashboard, named for the time the operational day is reviewed. It consolidates everything a crew or coordinator needs to start the day into a single, scannable view.

It draws together overnight events, the status of active missions, current and forecast weather, crew availability, and the notes handed over from the previous shift so nothing is lost at the change of watch.

Displays

- Overnight events and incidents logged since the last briefing.
- Active missions currently in progress across the fleet.
- Weather summary and significant forecast changes.
- Crew availability for the day ahead.
- Shift handover notes carried forward from the night team.

Who uses it

- Pilots, nurses, doctors, dispatchers, and senior base staff at the start of each operational day.

Shift & Fleet Status

Real-time status board for aircraft, crew and bases

Shift & Fleet Status is a real-time status board covering every aircraft, all crew on duty, and base activity across RFDS SE. It answers the question "who and what is available right now?" at a glance.

The board updates continuously so coordinators can make tasking decisions against an accurate, current picture of the whole operation.

Displays

- Serviceability and location of each aircraft in the fleet.
- Crew currently on duty and their assignments.
- Activity level and readiness across all bases.

Who uses it

- Dispatchers, senior base pilots, and management.

Ops Room Display

Full-screen wall display for operations rooms

The Ops Room Display is a full-screen wall display mode intended for operations rooms. It is optimised for viewing at a distance and refreshes automatically so it never needs manual interaction.

The display cycles through the information most useful to a coordination team: active flights, weather alerts, and live crew status.

Note Auto-refresh keeps the display current without user input, making it suitable for unattended wall-mounted screens.

Displays

- Active flights currently airborne or tasked.
- Weather alerts affecting the network.
- Crew status across bases.

Who uses it

- Operations room staff and dispatchers; visible to all present.

3

CHAPTER 3

Missions

The Missions group is the operational heart of Medivac.ai, spanning the entire life-cycle of an aeromedical task — from the moment a request is received through planning, mapping, and specialised mission types.

Chapter 3

Missions

Dispatch & Intake

Receiving, triaging and dispatching requests

Dispatch & Intake is the primary workflow for receiving, triaging, and dispatching aeromedical requests. It is where a new call becomes a planned and assigned mission.

The workflow captures the full context of a request so the coordination team can make a fast, safe tasking decision and assign the right aircraft.

Referral PDF Attachment: Where a referral document is provided by the requesting facility, click the 'Attach Referral PDF' button in the Dispatch & Intake form. The attached filename is displayed with a remove (x) control — use this to replace an incorrect document before submission. The attachment is automatically cleared on form reset. All clinical staff reviewing the mission should open and review the attached referral PDF prior to departure.

Captures

- Patient details relevant to the retrieval.
- Referring facility and contact information.
- Priority classification for triage.
- Aircraft assignment for the tasked mission.
- Attached referral PDF (optional), with replace and auto-clear-on-reset controls.

Who uses it

- Dispatchers and coordinators, with clinical input from nurses and doctors.

NEPT Tasking

Non-Emergency Patient Transport planning

NEPT Tasking is the Non-Emergency Patient Transport planning tool. It is built for the higher-volume, schedulable side of the operation where several patients may be moved on coordinated runs.

It supports batch scheduling, routing optimisation, and load planning so NEPT runs are efficient and correctly balanced.

Capabilities

- Batch scheduling of multiple NEPT tasks.
- Routing optimisation to reduce distance and time.
- Load planning for each run.

Who uses it

- NEPT coordinators and dispatchers.

Passenger Manifest

Digital manifest for all persons aboard

The Passenger Manifest is the digital manifest for every person aboard an aircraft. It ensures accurate records for weight-and-balance, safety, and regulatory purposes.

It captures the weight, identification, and medical notes for each person and generates a printable manifest for the crew.

Captures

- Weight of each person aboard.
- Identification details.
- Relevant medical notes.
- Printable manifest output.

Who uses it

- Pilots, nurses, and doctors preparing for departure.

Mission Board

Kanban-style live board of all missions

The Mission Board is a Kanban-style live board showing all active and pending missions across the fleet. Missions move across columns as their state changes, giving the whole team shared visibility.

It provides an at-a-glance operational picture of what is in flight, what is queued, and what is complete.

Who uses it

- Dispatchers, coordinators, and management for fleet-wide oversight.

NSW Flight Map

Interactive live map of flights, bases and weather

The NSW Flight Map is an interactive live map showing all active RFDS SE flights, together with bases, hospitals, and weather overlays. It places the operation in geographic context.

Coordinators can see where every aircraft is, the facilities in play, and the weather that may affect routing.

Shows

- Active RFDS SE flights in real time.
- Base and hospital locations.
- Weather overlays affecting the region.

Who uses it

- Dispatchers, pilots, and operations room staff.

Flight Planning

Route planning with waypoints, fuel and NOTAMs

Flight Planning provides route planning built around ICAO waypoints. It produces the operational plan a crew needs to fly a mission safely and legally.

The tool calculates fuel, nominates alternate airfields, and integrates NOTAMs so the plan reflects current airspace and airfield conditions.

Capabilities

- Route construction using ICAO waypoints.
- Fuel calculations for the planned route.
- Alternate airfield selection.
- NOTAM integration for current advisories.

Who uses it

- Pilots and senior base pilots.

Special Missions

Non-standard mission workflows

Special Missions is the workflow for non-standard missions that fall outside routine tasking. These missions often require additional coordination, equipment, or crew.

Supported scenarios include organ transport, neonatal retrievals, and search & rescue coordination.

Mission types

- Organ transport.
- Neonatal retrieval.
- Search & rescue coordination.

Who uses it

- Dispatchers, doctors, and specialist retrieval teams.

Ferry Flights

Positioning flights with crew and maintenance

Ferry Flights manages positioning flights — movements of aircraft without patients, typically to reposition an asset or return it to base.

The module handles crew assignments, fuel planning, and maintenance coordination so ferry legs are planned as carefully as tasked missions.

Handles

- Crew assignments for positioning legs.
- Fuel planning.
- Maintenance coordination around the flight.

Who uses it

- Pilots, senior base pilots, and engineers.

4

CHAPTER 4

Operations

The Operations group houses the planning, calculation, and governance tools that keep missions legal, costed, and risk-assessed — including the dedicated Senior Base Pilot portal.

Chapter 4

Operations

Crew Rest Calculator

Legal crew rest under CASA and EBA rules

The Crew Rest Calculator determines the legal crew rest requirements that apply to a given duty. It removes guesswork from a safety-critical calculation.

It applies CASA fatigue rules together with the rest provisions in the RFDS Enterprise Bargaining Agreement (EBA) to return a compliant rest requirement.

Considers

- CASA fatigue rules.
- RFDS EBA rest provisions.

Who uses it

- Pilots, senior base pilots, and rostering staff.

Charter Quote

Charter cost estimates by aircraft type

Charter Quote generates charter cost estimates for prospective work. It bases each estimate on the aircraft type, the distance to be flown, the true airspeed (TAS), and the applicable hourly rate.

The current hourly rates used by the calculator are listed below. All prices are in Australian dollars and exclude GST.

Aircraft type	Hourly rate (AUD ex-GST)
B200	\$4,000 / hr
B350	\$4,800 / hr
PC12	\$3,200 / hr
PC24	\$6,000 / hr
CL60	\$9,500 / hr
HELO	\$8,500 / hr

Charter hourly rates. All prices AUD, ex-GST.

Who uses it

- Business development, management, and admin staff preparing quotes.

Mission Optimiser

AI-assisted multi-leg mission optimisation

The Mission Optimiser is an AI-assisted tool that optimises multi-leg missions. Where a mission involves several legs or competing constraints, it proposes the most effective plan.

Optimisation balances cost, time, and resource utilisation to make the best use of the fleet.

Optimises for

- Cost of the overall mission.
- Total time.
- Resource and asset utilisation.

Who uses it

- Coordinators, senior base pilots, and management.

Operational Risk Assessment (ORA)

Structured risk framework for mission approval

The Operational Risk Assessment (ORA) is a structured risk assessment framework used for mission approval. It ensures every mission is evaluated consistently before it is authorised.

The assessment captures weather, pilot currency, medical complexity, and asset availability, producing a documented basis for the approval decision.

Captures

- Weather conditions and forecast.
- Pilot currency.
- Medical complexity of the task.
- Asset availability.

Who uses it

- Pilots, senior base pilots, safety officers, and approving managers.

Ops Task Management

Internal task and action item tracker

Ops Task Management is the internal task and action-item tracker for operational staff. It keeps operational follow-ups visible and accountable.

Tasks can be assigned, tracked, and closed out so nothing slips between shifts or teams.

Who uses it

- Operational staff across all roles.

Regulations Reference

Searchable CASA, Ops Manual and EBA library

The Regulations Reference is a searchable library of the regulations and manuals that govern the operation. It puts authoritative guidance a search away.

It covers CASA Part 121 and Part 135 regulations, the RFDS Operations Manual, and EBA excerpts.

Contains

- CASA Part 121 regulations.
- CASA Part 135 regulations.
- RFDS Operations Manual.
- EBA excerpts.

Who uses it

- All operational and compliance roles.

Senior Base Pilot Portal

Dedicated portal for the Senior Base Pilot role

The Senior Base Pilot Portal is a dedicated workspace for the Senior Base Pilot role. It brings the oversight responsibilities of the role into one place.

From the portal, the Senior Base Pilot manages crew oversight, tracks currency, and completes the daily sign-off.

FTL Compliance Panel — Located on the Overview tab between the leave summary and quick links. Displays pilots at risk by base with three colour-coded tiers, plus an all-clear state when no pilots are at risk across any base. It includes a quick link to the FTL Compliance Engine and a 'View full FDP/Duty tab' button.

FDP Warning System — 3HR, 2HR, and 1HR FDP warnings are surfaced in the SBP Portal. These system-generated warnings support the SBP's oversight role and should trigger proactive crew planning. A pilot at HARD BLOCK status must not be rostered under any circumstances.

Provides

- Crew oversight.
- Currency tracking.
- Daily sign-off.
- FTL Compliance Panel with colour-coded pilot risk tiers by base.
- 3HR, 2HR, and 1HR FDP warning surfacing.

FTL Compliance Panel tiers

- 3HR WARN (yellow) — more than 120 minutes and up to 180 minutes of flight-duty time remaining.
- 2HR WARN (amber) — more than 60 minutes and up to 120 minutes remaining.
- HARD BLOCK (red) — 60 minutes or less remaining; the pilot cannot be legally assigned.
- All Clear (green) — no pilots at risk across any base.

Who uses it

- Senior base pilots.

5

CHAPTER 5

Assets

The Assets group covers the physical fleet and ground equipment — handover, technical logs, serviceability, engineering work orders, and utilisation reporting.

Chapter 5

Assets

Pilot Handover Board

End-of-shift handover tool

The Pilot Handover Board is an end-of-shift handover tool. It structures the transfer of information between outgoing and incoming pilots so the state of each aircraft is clearly communicated.

It records aircraft status, outstanding defects, fuel state, and any tasks carried over to the next shift.

Records

- Aircraft status.
- Outstanding defects.
- Fuel state.
- Task carry-overs to the next shift.

Who uses it

- Pilots and senior base pilots.

Tech & Journey Log

CASA-compliant digital technical and journey log

The Tech & Journey Log is the digital aircraft technical and journey log. It is CASA-compliant and forms the authoritative record of each aircraft's activity.

It records flight times, fuel, defects, and maintenance actions for every flight.

Note This log is CASA-compliant and serves as the aircraft's official technical and journey record.

Records

- Flight times.
- Fuel uplift and usage.
- Defects raised.
- Maintenance actions taken.

Who uses it

- Pilots and engineers.

Aircraft Status

Fleet-wide serviceability status board

Aircraft Status is a fleet-wide status board showing the current state of every aircraft. It supports tasking and maintenance planning decisions.

For each aircraft it shows serviceability, location, next maintenance due, and assigned crew.

Shows

- Serviceability of each aircraft.
- Current location.
- Next maintenance due.
- Assigned crew.

Who uses it

- Dispatchers, engineers, pilots, and management.

Ground Vehicles

Base ground vehicle tracking

Ground Vehicles tracks the base ground vehicles that support the operation, such as patient transfer vehicles and support cars.

It shows availability, maintenance status, and the crew assigned to each vehicle.

Tracks

- Vehicle availability.
- Maintenance status.
- Assigned crew.

Who uses it

- Base staff, engineers, and dispatchers.

Engineering

Work order management for maintenance

Engineering provides work-order management for aircraft maintenance. It is where defects become tracked, actioned maintenance work.

Work orders link directly to Tech Log defects, closing the loop between the log and the engineering response.

Provides

- Creation and management of maintenance work orders.
- Linkage to Tech Log defects.

Who uses it

- Engineers.

Maintenance Planner

Forward-looking maintenance schedule

The Maintenance Planner is a forward-looking maintenance schedule for the fleet. It helps engineering stay ahead of due maintenance and avoid unplanned downtime.

It provides due-date tracking and parts management across all aircraft.

Provides

- Forward maintenance schedule for the fleet.

- Due-date tracking.
- Parts management.

Who uses it

- Engineers and maintenance planners.

Asset Utilisation

Fleet utilisation and efficiency reporting

Asset Utilisation is a reporting dashboard for fleet utilisation. It shows how hard each asset is working and where efficiency can be improved.

It reports hours flown and asset efficiency metrics across the fleet.

Reports

- Fleet utilisation.
- Hours flown.
- Asset efficiency metrics.

Who uses it

- Management and engineering.

Demand Forecasting (Missions)

Predictive mission-load analysis

Demand Forecasting provides predictive mission-load analysis to support operational planning. Accessible under Missions in the left navigation.

Analyses historical tasking patterns, seasonal demand, and base-specific volumes to assist with resource planning.

Note Navigation update (July 2026): Demand Forecasting has moved from Business to Missions in the left navigation.

Analyses

- Historical tasking patterns.
- Seasonal demand.
- Base-specific volumes.

Who uses it

- Coordinators, senior base pilots, and management for resource planning.

FBO & Handling (Assets)

Ground service coordination at Fixed Base Operators

FBO & Handling manages ground service coordination at Fixed Base Operators across the RFDS SE route network. Accessible under Assets.

Tracks ground handling bookings, fuel uplifts, and ramp services for each base and outstation.

Note Navigation update (July 2026): FBO & Handling has moved from Business to Assets in the left navigation.

Tracks

- Ground handling bookings.
- Fuel uplifts.
- Ramp services for each base and outstation.

Who uses it

- Dispatchers, engineers, and base staff.

Airborne EFB (Assets)

Digital Electronic Flight Bag for in-flight use

The Airborne Electronic Flight Bag provides digital access to approved charts, weather, NOTAMs, and flight documents in-flight. Accessible under Assets.

Supports paperless cockpit operations across the B200, B350, PC-12, and PC-24 fleet.

Note Navigation update (July 2026): Airborne EFB has moved from Business to Assets in the left navigation.

Provides

- Approved charts.
- Weather.
- NOTAMs.
- Flight documents, viewable in-flight.

Who uses it

- Pilots across the B200, B350, PC-12, and PC-24 fleet.

6

CHAPTER 6

Crew & People

The Crew & People group manages the workforce — rostering, organisational structure, fatigue management, and the training and currency records that keep crew qualified.

Chapter 6

Crew & People

Crew Roster

Monthly roster with shifts, leave and fatigue

The Crew Roster provides a monthly roster view for all crew. It is the single source of truth for who is working when.

The roster shows shift assignments, leave, standby, and fatigue status so planners can see coverage and risk together.

Shows

- Shift assignments.
- Leave.
- Standby.
- Fatigue status.

Who uses it

- Rostering staff, senior base pilots, and all crew.

Org Chart & Key Contacts

Visual org chart with contacts

Org Chart & Key Contacts presents a visual organisation chart for RFDS SE. It makes the structure of the organisation and its reporting lines clear.

Each position includes contact details, roles, and reporting lines.

Shows

- Visual organisation chart.
- Contact details.
- Roles and reporting lines.

Who uses it

- All staff.

Duty & FRMS

Fatigue Risk Management System

Duty & FRMS is the Fatigue Risk Management System. It monitors duty and rest to manage fatigue as a safety risk.

It tracks duty hours and rest periods and flags potential fatigue exceedances before they become a problem.

For system-generated FTL compliance monitoring by base, refer to the FTL Compliance Panel in the Senior Base Pilot Portal (Chapter 4 — Operations). The Crew Rest Calculator remains the primary

self-declaration tool for individual pilots.

Tracks

- Duty hours.
- Rest periods.
- Flags for potential fatigue exceedances.

Who uses it

- Crew, rostering staff, and safety officers.

Check & Training

Currency tracking for all crew

Check & Training provides currency tracking for all crew. It ensures every crew member remains qualified for the duties they perform.

It tracks medical, licence, type rating, recurrency, and annual checks.

Tracks

- Medical currency.
- Licence currency.
- Type rating.
- Recurrency training.
- Annual checks.

Who uses it

- Check-and-training staff, senior base pilots, and all crew.

7

CHAPTER 7

Clinical

The Clinical group supports the medical side of the operation — equipment and consumables, after-hours decision support, and pre-retrieval telehealth assessment.

Chapter 7

Clinical

Medical Equipment

Inventory of medical equipment across the fleet

Medical Equipment is the inventory of all medical equipment across the fleet and bases. It ensures clinical teams know what is available and ready to use.

It records the serviceable status and calibration dates for each item.

Records

- Serviceable status of each item.
- Calibration dates.

Who uses it

- Nurses, doctors, and clinical equipment managers.

Stock Usage & Orders

Consumable stock management

Stock Usage & Orders manages consumable medical stock. It keeps clinical supplies at the right level across the network.

It tracks usage, raises reorder alerts, and manages orders.

Provides

- Usage tracking.
- Reorder alerts.
- Order management.

Who uses it

- Nurses, doctors, and stores staff.

After-Hours AI Med Line

AI clinical decision support after hours

The After-Hours AI Med Line provides AI-assisted clinical decision support for after-hours medical queries. It offers timely guidance when specialist advice may not be immediately at hand.

It is a support tool only and is not a replacement for clinical judgment.

Note The After-Hours AI Med Line is decision support only and is not a replacement for clinical judgment.

Who uses it

- Nurses and doctors after hours.

Telehealth Portal

Video consultation for remote assessment

The Telehealth Portal is a video consultation platform for remote patient assessment. It lets clinical teams evaluate a patient before committing a retrieval asset.

Assessment is conducted prior to retrieval so the right resources are dispatched.

Provides

- Video consultation.
- Remote patient assessment prior to retrieval.

Who uses it

- Doctors and nurses.

8

CHAPTER 8

AI & Comms

The AI & Comms group provides AI presenters and analysts — avatar-led briefings and Q&A,, mission analysis, and document interrogation.

Chapter 8

AI & Comms

Jennifer — Presenter

AI video presenter for briefings and demos

Jennifer — Presenter is an AI video presenter used for stakeholder briefings and client demos. She delivers consistent, polished presentations on demand.

The presenter mode is ideal for repeatable briefings where a professional, scripted delivery is required.

Who uses it

- Management and business development for external briefings.

Jennifer — Live Q&A

Live interactive Q&A; with Jennifer avatar

Jennifer — Live Q&A; is a live, interactive Q&A; session mode featuring the Jennifer AI avatar. It allows an audience to ask questions and receive responses in real time.

This mode extends the presenter experience into a two-way, conversational format.

Who uses it

- Management and stakeholders during interactive sessions.

Graham — Live Q&A

Live interactive Q&A; with Graham avatar

Graham — Live Q&A; is a live, interactive Q&A; with the Graham AI avatar, with an operations focus. It answers operationally oriented questions in real time.

Graham complements Jennifer by concentrating on operational subject matter.

Who uses it

- Operational staff and stakeholders during interactive sessions.

AI Mission Analyst

Analyses completed missions for insights

The AI Mission Analyst analyses completed missions to surface patterns and insights that would be hard to see manually. It turns mission history into actionable knowledge.

It examines patterns, cost trends, and broader operational insights across completed work.

Analyses

- Patterns across completed missions.
- Cost trends.

- Operational insights.

Who uses it

- Management and operations analysts.

Document AI

Interrogate aviation documents with AI

Document AI lets users upload and interrogate aviation documents, SOPs, and regulations using AI. It makes large document sets quick to query.

Users can ask natural-language questions and receive answers grounded in the uploaded material.

Handles

- Aviation documents.
- Standard operating procedures (SOPs).
- Regulations.

Who uses it

- All operational and compliance roles.

AI Maintenance Assistant

Approved Manuals — Quick Access

The AI Maintenance Assistant includes an 'Approved Manuals — Quick Access' grid displayed above the safety disclaimer. Nine approved reference manuals are available for immediate download or view.

These manuals are also cross-referenced in the Engineering & Maintenance Planner workflow (Chapter 5 — Assets).

Approved manuals

- B200 Quick Reference Handbook (QRH).
- B350 Quick Reference Handbook (QRH).
- Pilot Training Manual (B200/B200GT).
- Super King Air B200 Pilot Checklist.
- FMS Raisbeck POH (B200/B200C/B200T).
- Collins TCAS-4000 TCAS II Manual.
- Memory Flash Cards (B200/B200C — Late Model).
- DMM Quick Reference (ID-276660).
- FRSM Practices & Techniques Manual.

Who uses it

- Engineers and pilots requiring immediate reference access.

9

CHAPTER 9

Business

The Business group manages the commercial and compliance side of the operation — invoicing, reconciliation, cost optimisation, reporting, tenders, contracts, ISO compliance, and payroll.

Chapter 9

Business

Invoicing

Generate and manage invoices

Invoicing generates and manages invoices across the organisation's revenue streams. It underpins accurate and timely billing.

It covers charter, NEPT, and government contract billing.

Covers

- Charter billing.
- NEPT billing.
- Government contract billing.

Who uses it

- Finance and admin staff.

Fee Reconciliation

Reconcile fees against contracted rates

Fee Reconciliation reconciles fees against contracted rates. It ensures the organisation is billing and being paid correctly.

It flags discrepancies so they can be investigated and resolved.

Provides

- Reconciliation against contracted rates.
- Discrepancy flagging.

Who uses it

- Finance staff.

Cost Optimizer

Identify cost reduction opportunities

The Cost Optimizer identifies cost-reduction opportunities across fleet operations. It highlights where money could be saved without compromising service.

Findings support management decisions on efficiency and spend.

Who uses it

- Management and finance staff.

Audit & Reports

Operational, financial and compliance reports

Audit & Reports generates operational, financial, and compliance reports. It produces the documentation the organisation needs for internal and external scrutiny.

It supports CASA audit preparation directly.

Generates

- Operational reports.
- Financial reports.
- Compliance reports.
- CASA audit preparation support.

Who uses it

- Management, finance, and compliance staff.

Government Tenders

Tender submissions and contract tracking

Government Tenders manages tender submissions and tracks contracts for government health contracts. It keeps competitive bids organised and on-schedule.

It follows submissions through to awarded contracts.

Who uses it

- Business development and management.

Contract Compliance

Monitor compliance and KPIs

Contract Compliance monitors compliance with active contracts. It ensures contractual obligations are being met.

It includes KPI tracking against contracted performance measures.

Provides

- Monitoring of active contracts.
- KPI tracking.

Who uses it

- Management and contract managers.

ISO Compliance

ISO 9001 compliance tools

ISO Compliance provides ISO 9001 compliance tools. It supports the organisation's quality management system.

It covers document control, non-conformance management, and audit trails.

Provides

- Document control.
- Non-conformance management.
- Audit trails.

Who uses it

- Quality, compliance, and management staff.

Payroll & Leave

Leave management and payroll export

Payroll & Leave provides leave management and payroll data export. It bridges rostered work and the payroll process.

Payroll data is exported for processing by the payroll system.

Provides

- Leave management.
- Payroll data export for processing.

Who uses it

- Admin, HR, and finance staff.

10

CHAPTER 10

Administration

The Administration group provides the platform controls — users and permissions, system settings, integrations, and internal project and idea management.

Chapter 10

Administration

User Management

Create and manage user accounts

User Management is where administrators create and manage user accounts. It controls who has access to Medivac.ai.

Administrators can create accounts, assign roles, and reset passwords.

Provides

- Account creation and management.
- Role assignment.
- Password resets.

Who uses it

- Administrators.

RBAC Permissions

Role-based access control matrix

RBAC Permissions provides a role-based access control matrix. It defines precisely what each role can do within the platform.

Administrators configure what each role can view or edit.

Provides

- Configuration of view permissions per role.
- Configuration of edit permissions per role.

Who uses it

- Administrators.

System Settings

Platform-wide configuration

System Settings holds platform-wide configuration. It governs how the platform behaves for everyone.

It covers notifications, integrations, and data retention.

Covers

- Notifications.
- Integrations.
- Data retention.

Who uses it

- Administrators.

API Integration Hub

Manage external API connections

The API Integration Hub manages external API connections. It is the control point for the data feeds that power the platform.

Managed integrations include weather, NOTAM, and health system connections.

Manages

- Weather integrations.
- NOTAM integrations.
- Health system integrations.

Who uses it

- Administrators.

Project Management

Internal project and initiative tracking

Project Management provides internal project and initiative tracking. It keeps development work organised.

It tracks initiatives on the Medivac.ai development roadmap.

Who uses it

- Management and the development team.

Idea Hub

Staff suggestion and feature request portal

The Idea Hub is a staff suggestion and feature-request portal. It gives everyone a channel to shape the platform.

Staff can submit suggestions and feature requests for consideration.

Who uses it

- All staff.

Bug Report Button

Global bug reporting from any page

A global Bug Report button (red bug icon) appears beside the Help button in the header of every page. It gives every user a fast, consistent way to flag issues to the development team.

To submit a bug report: click the icon — the modal auto-detects the current page — select a category (Display/Layout, Data not saving, Incorrect calculation, Feature not working, Performance/slowness, Crash/error, Other) — set severity (Low / Medium / High / Critical) — enter description and steps to reproduce — submit. The page can be changed via the searchable dropdown if the issue is on a different page. Reports are stored in the Medivac.ai database and reviewed by the development team.

Categories

- Display/Layout.
- Data not saving.
- Incorrect calculation.
- Feature not working.
- Performance/slowness.
- Crash/error.
- Other.

Severity levels

- Low.
- Medium.
- High.
- Critical.

Who uses it

- All users, on every page.

Security & Compliance

IT security audit status and known gaps

Medivac.ai has completed a formal IT security audit (July 2026).

Controls currently in place: HTTP security headers (Helmet), CORS policy, and API rate limiting.

Known gaps being remediated: authentication layer (planned), CSP unsafe-inline flag (planned), and end-to-end encryption at rest (roadmap). Administrators should be aware these gaps exist in the current version and plan access accordingly pending remediation.

Note Administrators should plan access accordingly while these gaps remain outstanding.

Controls in place

- HTTP security headers (Helmet).
- CORS policy.
- API rate limiting.

Known gaps (remediation planned)

- Authentication layer (planned).
- CSP unsafe-inline flag (planned).
- End-to-end encryption at rest (roadmap).

Who uses it

- Administrators.

Development Roadmap — Horizon Features

Ten Horizon feature pages

The Development Roadmap (Administration → Project Management) includes ten Horizon feature pages, grouped into three release horizons.

All Horizon 1 features are now marked as completed in the roadmap.

Horizon 1 (Now — Completed)

- Hospital Referral Portal.
- FTL Compliance Engine.
- In-Flight Care Record.
- Component Life Tracker.

Horizon 2 (Next)

- ADS-B Live Tracking.
- Offline PWA Mode.

Horizon 3 (Later)

- Advanced In-Flight Care Record.
- Advanced Component Life.
- AI Predictive Maintenance.
- International Expansion Tools.

Who uses it

- Management and the development team.
